Announcement: Changes to the v3.0 Data Collection Tool/Form

- A. COVID-19 data elements have been added in the TVT v3.0 dataset!
The ability to capture patients who test positive for COVID-19 has been added to the dataset in the Condition History (12903), Intra/post-procedure Events (12153) and Follow-up Events (12933).
- B. Update on Atrial Fibrillation Class (13179):
A new selection “None” was added to account for patients not currently in not in atrial fibrillation (within the past 30 days).
- C. Mitral procedure basic dataset (effective for patients being discharged April 1, 2021 or later) is available!
The TMVR and Mitral leaflet clip data collection forms are now highlighted to identify what is included in the “basic dataset (BDS)”. Updated data collection forms are available under “Resources” on the Documents Home Page. Data elements that are considered “Basic” are mandatory and have data quality thresholds. All full data set elements (FDS) are **optional** and do **not** have data quality thresholds.
1. Note that tricuspid procedures do NOT have a basic dataset at this time.
- D. TAVR basic dataset updates! (effective for patients being discharged 4-1-2021 or later)
1. Procedure history date (14252) has been added to the basic dataset for any prior aortic, mitral and tricuspid valve procedure
 2. Intra/Post procedure event date (14275) has been added to the basic dataset.
 3. TAVR event (page 7 of the DCF) and follow-up event details (page 11 of the DCF) for stroke/TIA and reintervention (formerly called adjudication) have been added to the basic dataset: Status (14314 and 14387), Date of Death (14315, 14388), Neuro Deficit with Rapid Onset (14317, 14390), Clinical Presentation (14318, 14391) Event Related Sequelae (14351, 14396), Discharge Location (14352, 14420), AV Re-intervention Type (14354, 14398), Primary Indication (14355, 14399), AR (14356, 14400)
 4. Follow-up CTA leaflet dysfunction noted (13695) has been added to the basic dataset.
 5. The following data elements that are identified as ‘basic’, however, do not have a threshold for TAVR procedures:
 - a. Residence (13803)
 - b. Heart failure hospitalization w/in 1 year (13707)
 - c. Mitral Valve Area (13316),
 - d. Mitral Valve Disease Etiology (13490)
