CathPCI

Dashboard NEWS…..

FDA has approved the CathPCI Registry for a Post-Approval Study

Patients in the CathPCI Registry, who received PCI and in whom a Shockwave Intravascular Lithotripsy (IVL) System with Shockwave C2 Coronary IVL Catheter was utilized, should be abstracted in your CathPCI Registry v5 data collection tool addressing all relevant questions as usual. Additionally, the *Auxiliary Data Collection Shockwave Intravascular Lithotripsy (IVL) Dataset* will need to be completed to engage in this initiative.

 The Shockwave data collection form and data dictionary are available on the registry Documents Home Page to support data capture on paper until the Auxiliary Data Collection tool is available. Please ensure the Shockwave data set is completed for all applicable 2021Q3 patients (discharged after June 30, 2021), it is at your discretion to complete the Shockwave data set for patients discharged prior to this date.

For more information on the Shockwave Intravascular Lithotripsy (IVL) System with Shockwave C2 Coronary IVL Catheter, click here. Please monitor the Announcement page for updates on this initiative and feel free to e-mail the NCDR team at ncdr@acc.org with any questions.

NCDR Data Quality Program Update

The NCDR is kicking off the CathPCI Registry 2021 audit (on 2020 data) at the end of the month! The Registry Site Manager and Medical Director of facilities randomly selected for the audit will be notified by email, all instructions pertaining to the audit will be included. Facilities who have not been notified via email or who did not find an audit notification in the dashboard's file delivery by Monday October 29, 2021, have not been selected for this year's audit cycle. Thank you.

NEWS – Name Change for the Provider Level Dashboard

To more accurately convey the NCDR Provider Level Dashboards display the care of skilled cardiovascular professionals who are tailoring their treatments to individual patients, we are pleased to share the name has been updated to Professional Level Dashboard. Healthcare professionals with a National Provider Identification (NPI) number (e.g. medical doctors, nurse practitioners, etc.) who are identified in the data abstraction process will receive registry metric feedback on the Professional Level Dashboard and can harness this data for their ongoing quality improvement efforts.

Sunsetting the Reduce the Risk: PCI Bleed Dashboard

On August 31, 2021 the ACC will conclude the Reduce the Risk: PCI Bleed dashboard as part of the successful completion of the Reduce the Risk: PCI Bleed Quality Campaign. More than 200 hospitals participated in the campaign over the last 3 years and contributed to critical discussions on how best to minimize PCI associated bleeding rates. A true community was built and united around a shared commitment to optimizing patient care and outcomes!

If you would like to retain a copy of your performance in the campaign, navigate to the CathPCI Registry Dashboard and select 'Reduce the Risk: PCI Bleed' from the hamburger menu. Select the Ending Timeframes for the reports of interest and export to Excel or PDF. The Assessment, Toolkit and National webinars will continue to be available (Reduce the Risk Features (acc.org)). We encourage all CathPCI Registry participants to use these resources and share your best practices and lessons learned with each other and through future Quality Summit abstracts and presentations.
